1. Summary

For each of the 12 roles, one employee's plan was generated by Pipeline 1 (GenAI) and checked by Pipeline 2 (Python). Every requirement the AI generated, and every requirement the Python matrix expected, produced one row. The SRS asks for at least 100 compared results; this report has **1,185**.

Capture source: live API

The plans compared in this report were generated by **gpt-5.6-luna** on 2026-09-28 10:57. Pipeline 2 itself never uses AI.

Definitions

Column	Meaning
Python expected requirement	The requirement text, obligation and due stage in the Role Requirement Matrix (built from documents by rules, no AI)
GenAI result	What the generated plan said: mandatory or optional, due stage, the source it cited, and the module
Match/Mismatch	Match = the status is Verified and obligation, source document, section and due stage all agree. Not generated = expected but absent
Coverage status	Covered, Missing, Not required (optional item not included) or Not counted (failed a check)
Traceability status	Result of looking up the cited source: Traced, Source not found, Outdated, Untrusted, Quarantined
Validation status	Pipeline 2's verdict for the row (Verified, Contradiction Detected, Requirement Missing ...)
Explanation of disagreement	The validator's own reason, written when the two pipelines disagree

Abbreviations: Warn. = Verified with Warning; Missing = Requirement Missing; Opt. excl. = Optional Not Included

3. Disagreements explained

864 results disagree (optional items the AI chose not to include are excluded). They fall into these groups:

Validation status	Reason	Count
Requirement Missing	Mandatory requirement from the matrix is not covered.	861
Verified with Warning	Due stage differs	3

What the groups mean

- **Contradiction Detected - source is overridden:** the AI cited a clause that loses a precedence conflict (usually an FAQ or older SOP). Python replaces it with the winning source; the reviewer sees both.
- **Verified with Warning - due stage differs:** the requirement is right but scheduled in a different stage than the matrix expects.
- **Requirement Missing:** a mandatory requirement the AI did not include; coverage drops and approval is blocked until it is added.
- **Unsupported / Source not found:** the AI's text or citation cannot be matched to an approved clause - a possible hallucination.
